

Deck Scarifiers / Derusting Units

VEZOS has been active in the marine & shipping industry for close to five decades. Over the years and under second generation administration, VEZOS offers a complete range of surface preparation units to backup the market.

VEZOS deck scarifiers are the best choice due to their tough construction, high productivity & proven technology in the marine industry. The PROGRIND head cutter is located in the front of the unit, leaving the less possible untreated surface and reaching close to the edge of the surface. Changeable cutting tools can be adjusted, such as chains, chisels, cutting stars, brushes & diamond cutters, depending on the application use. PROGRIND 250 scarifiers have an adjustable height regulator, changing the cutting depth.

• Applications

Cargo vessels
All types of metal surfaces
Industrial metal surfaces
Large rust removal jobs

PROGRIND deck scarifiers are designed as a one piece frame - fully welded, avoiding joint loosening. Due to the closed double ball bearing system in each side of the cutting head, the **ProGrind** scarifier is industry's most robust unit for all industrial & marine applications. VEZOS offers a custom built service, for industrial or marine application, depending on the customers needs. A suction system for dust & material collection can be adapted to the scarifiers, for a cleaner job site.

• Features
